-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hunter et al (US 2002/0175862 A1).

Regarding claim 1, Hunter (Figures 1-5b, para. 22-26) discloses an antenna comprising at least one of radiating elements 20; an antenna ground element 21; a dielectric member (not numbered); and a circuit board (not numbered), wherein the dielectric member is arranged between the radiating element and the antenna ground element, and the radiating element and the antenna ground element are held to the dielectric member with a predetermined slant relative to the circuit board.

***Allowable Subject Matter***

3. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 2, Hunter fails to further teach, among other features, that the antenna ground element is arranged inside the dielectric element by insert molding.

Regarding claims 3-5, Hunter fails to further teach, among other features, a second radiating element that is integrally arranged with the dielectric member, wherein the same

dielectric member is arranged between both the first and second radiating elements and the antenna ground element.

Regarding claim 6, Hunter fails to further teach, among other features, that the first antenna element functions as a part of an antenna specifically for an onboard unit of an electronic toll collecting system.

### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Patent 5,886,668 discloses an antenna unit comprising a radiating element; an antenna ground element; a dielectric member; and a circuit board, wherein the radiating element being disposed on a slant relative to the circuit board.
